

Remarks on the Execution of Timothy McVeigh

June 11, 2001

This morning the United States of America carried out the severest sentence for the gravest of crimes. The victims of the Oklahoma City bombing have been given not vengeance but justice. And one young man met the fate he chose for himself 6 years ago.

For the survivors of the crime and for the families of the dead, the pain goes on. Final punishment of the guilty cannot alone bring peace to the innocent. It cannot recover the loss or balance the scales, and it is not meant to do so. Today every living person who was hurt by the evil done in Oklahoma City can rest in the knowledge that there has been a reckoning.

At every point, from the morning of April 19, 1995, to this hour, we have seen the good that overcomes evil. We saw it in the rescuers who saved and suffered with the victims. We have seen it in a community that has grieved and held close the memory of the lost. We have seen it in the work of detectives, marshal, and police, and we've seen it in the courts. Due process ruled: The case was proved; the verdict was calmly reached; and the rights of the accused were protected and observed to the full and to the end. Under the laws of our country, the matter is concluded.

Life and history bring tragedies, and often they cannot be explained. But they can be redeemed. They are redeemed by dispensing justice, though eternal justice is not ours to deliver. By remembering those who grieve, including Timothy McVeigh's mother, father, and sisters, and by trusting in purposes greater than our own, may God in his mercy grant peace to all—to the lives that were taken 6 years ago, to the lives that go on, and to the life that ended today.

NOTE: The President spoke at 9:44 a.m. in the James S. Brady Briefing Room at the White House. Timothy McVeigh was tried, found guilty, and sentenced to death for the murder of 168 people in the April 19, 1995, bombing of the Alfred P. Murrah Federal Building in Oklahoma City, OK.

Remarks on Global Climate Change *June 11, 2001*

Good morning. I've just met with senior members of my administration who are working to develop an effective and science-based approach to addressing the important issues of global climate change.

This is an issue that I know is very important to the nations of Europe, which I will be visiting for the first time as President. The Earth's well-being is also an issue important to America, and it's an issue that should be important to every nation in every part of our world.

The issue of climate change respects no border. Its effects cannot be reined in by an army nor advanced by any ideology. Climate change, with its potential to impact every corner of the world, is an issue that must be addressed by the world.

The Kyoto Protocol was fatally flawed in fundamental ways. But the process used to bring nations together to discuss our joint response to climate change is an important one. That is why I am today committing the United States of America to work within the United Nations framework and elsewhere to develop with our friends and allies and nations throughout the world an effective and science-based response to the issue of global warming.

My Cabinet-level working group has met regularly for the last 10 weeks to review the most recent, most accurate, and most comprehensive science. They have heard from scientists offering a wide spectrum of views. They have reviewed the facts, and they have listened to many theories and suppositions. The working group asked the highly respected National Academy of Sciences to provide us the most up-to-date information about what is known and about what is not known on the science of climate change.

First, we know the surface temperature of the Earth is warming. It has risen by .6 degrees Celsius over the past 100 years. There was a warming trend from the 1890s to the 1940s, cooling from the 1940s to the 1970s, and then sharply rising temperatures from the 1970s to today.

There is a natural greenhouse effect that contributes to warming. Greenhouse gases

trap heat and thus warm the Earth because they prevent a significant proportion of infrared radiation from escaping into space. Concentration of greenhouse gases, especially CO₂, have increased substantially since the beginning of the industrial revolution. And the National Academy of Sciences indicates that the increase is due in large part to human activity.

Yet, the Academy's report tells us that we do not know how much effect natural fluctuations in climate may have had on warming. We do not know how much our climate could or will change in the future. We do not know how fast change will occur or even how some of our actions could impact it. For example, our useful efforts to reduce sulfur emissions may have actually increased warming, because sulfate particles reflect sunlight, bouncing it back into space. And finally, no one can say with any certainty what constitutes a dangerous level of warming and, therefore, what level must be avoided.

The policy challenge is to act in a serious and sensible way, given the limits of our knowledge. While scientific uncertainties remain, we can begin now to address the factors that contribute to climate change.

There are only two ways to stabilize concentration of greenhouse gases: One is to avoid emitting them in the first place; the other is to try to capture them after they're created. And there are problems with both approaches. We're making great progress through technology but have not yet developed cost-effective ways to capture carbon emissions at their source, although there is some promising work that is being done.

And a growing population requires more energy to heat and cool our homes, more gas to drive our cars. Even though we're making progress on conservation and energy efficiency and have significantly reduced the amount of carbon emissions per unit of GDP, our country, the United States, is the world's largest emitter of manmade greenhouse gases. We account for almost 20 percent of the world's manmade greenhouse emissions. We also account for about one-quarter of the world's economic output. We recognize the responsibility to reduce our emissions. We also recognize the other part of the story, that the rest of the world emits 80 percent

of all greenhouse gases, and many of those emissions come from developing countries.

This is a challenge that requires a 100 percent effort, ours and the rest of the world's. The world's second largest emitter of greenhouse gases is China. Yet, China was entirely exempted from the requirements of the Kyoto Protocol. India and Germany are among the top emitters. Yet, India was also exempt from Kyoto. These and other developing countries that are experiencing rapid growth face challenges in reducing their emissions without harming their economies. We want to work cooperatively with these countries in their efforts to reduce greenhouse emissions and maintain economic growth.

Kyoto also failed to address two major pollutants that have an impact on warming: black soot and tropospheric ozone. Both are proven health hazards. Reducing both would not only address climate change but also dramatically improve people's health.

Kyoto is, in many ways, unrealistic. Many countries cannot meet their Kyoto targets. The targets themselves were arbitrary and not based upon science. For America, complying with those mandates would have a negative economic impact, with layoffs of workers and price increases for consumers. And when you evaluate all these flaws, most reasonable people will understand that it's not sound public policy. That's why 95 Members of the United States Senate expressed a reluctance to endorse such an approach.

Yet, America's unwillingness to embrace a flawed treaty should not be read by our friends and allies as any abdication of responsibility. To the contrary, my administration is committed to a leadership role on the issue of climate change. We recognize our responsibility and will meet it—at home, in our hemisphere, and in the world.

My Cabinet-level working group on climate change is recommending a number of initial steps and will continue to work on additional ideas. The working group proposes the United States help lead the way by advancing the science on climate change, advancing the technology to monitor and reduce greenhouse gases, and creating partnerships within our hemisphere and beyond to monitor and measure and mitigate emissions.

I also call on Congress to work with my administration to achieve the significant emission reductions made possible by implementing the clean energy technologies proposed in our energy plan. Our working group study has made it clear that we need to know a lot more.

The U.N. Framework Convention on Climate Change commences to stabilizing concentrations at a level that will prevent dangerous human interference with the climate, but no one knows what that level is. The United States has spent \$18 billion on climate research since 1990, 3 times as much as any other country and more than Japan and all 15 nations of the EU combined.

Today I make our investment in science even greater. My administration will establish the U.S. Climate Change Research Initiative to study areas of uncertainty and identify priority areas where investments can make a difference. I'm directing my Secretary of Commerce, working with other agencies, to set priorities for additional investments in climate change research, review such investments, and to improve coordination amongst Federal agencies. We will fully fund high-priority areas for climate change science over the next 5 years. We'll also provide resources to build climate observation systems in developing countries and encourage other developed nations to match our American commitment. And we propose a joint venture with the EU, Japan, and others to develop state-of-the-art climate modeling that will help us better understand the causes and impacts of climate change.

America's the leader in technology and innovation. We all believe technology offers great promise to significantly reduce emissions, especially carbon capture, storage, and sequestration technologies. So we're creating the National Climate Change Technology Initiative to strengthen research at universities and national labs, to enhance partnerships in applied research, to develop improved technology for measuring and monitoring gross and net greenhouse gas emissions, and to fund demonstration projects for cutting-edge technologies, such as bioreactors and fuel cells.

Even with the best science, even with the best technology, we all know the United

States cannot solve this global problem alone. We're building partnerships within the Western Hemisphere and with other like-minded countries. Last week Secretary Powell signed a new CONCAUSA Declaration with the countries of Central America, calling for cooperative efforts on science research, monitoring and measuring of emissions, technology development, and investment in forest conservation. We will work with the Inter-American Institute for Global Change Research and other institutions to better understand regional impacts of climate change. We will establish a partnership to monitor and mitigate emissions. And at home, I call on Congress to work with my administration on the initiatives to enhance conservation and energy efficiency outlined in my energy plan, to implement the increased use of renewables, natural gas, and hydropower that are outlined in the plan, and to increase the generation of safe and clean nuclear power.

By increasing conservation and energy efficiency and aggressively using these clean energy technologies, we can reduce our greenhouse gas emissions by significant amounts in the coming years. We can make great progress in reducing emissions, and we will. Yet, even that isn't enough.

I've asked my advisers to consider approaches to reduce greenhouse gas emissions, including those that tap the power of markets, help realize the promise of technology, and ensure the widest possible global participation. As we analyze the possibilities, we will be guided by several basic principles. Our approach must be consistent with the long-term goal of stabilizing greenhouse gas concentrations in the atmosphere. Our actions should be measured as we learn more from science and build on it. Our approach must be flexible to adjust to new information and take advantage of new technology. We must always act to ensure continued economic growth and prosperity for our citizens and for citizens throughout the world. We should pursue market-based incentives and spur technological innovation. And finally, our approach must be based on global participation, including that of developing countries whose net greenhouse gas emissions now exceed those in the developed countries.

I've asked Secretary Powell and Administrator Whitman to ensure they actively work with friends and allies to explore common approaches to climate change consistent with these principles.

Each step we take will increase our knowledge. We will act, learn, and act again, adjusting our approaches as science advances and technology evolves. Our administration will be creative. We're committed to protecting our environment and improving our economy, to acting at home and working in concert with the world. This is an administration that will make commitments we can keep and keep the commitments that we make.

I look forward to continued discussions with our friends and allies about this important issue.

Thank you for coming.

NOTE: The President spoke at 11:10 a.m. in the Rose Garden at the White House. In his remarks, he referred to the Kyoto Protocol on Climate Change.

Proclamation 7450—Great Outdoors Week, 2001

June 11, 2001

By the President of the United States of America

A Proclamation

During Great Outdoors Week, our Nation celebrates the beauty and majesty of the great outdoors. This occasion allows Americans to reflect on the role our parks, forests, wildlife refuges, recreation areas, and other public lands and waters play in our lives. We also acknowledge how this wonderful shared legacy would not be possible without our strong tradition of natural resource conservation.

No other country boasts more extraordinary or more diverse options for recreation. Our Nation's federally managed lands account for nearly one in every three acres and, together with our Nation's waters, provide visitors with almost 2 billion opportunities for recreation annually. Eight of ten Americans participate at least monthly in outdoor recreation, and we may choose to challenge ourselves through demanding activities like

mountain climbing or river rafting. Enjoying the outdoors also can be as tranquil as bird-watching or viewing a golden sunset from a campsite. These experiences leave us with wonderful memories of time shared with family and friends, provide opportunities for improving our health, and expose us to the wonders of nature.

Recognizing that most Americans enjoy the outdoors by visiting Federal, State, or local sites, my budget proposes to fully fund the Land and Water Conservation Fund at \$900 million for Fiscal Year 2002. Half of the Fund will go toward grants to support State and local conservation and outdoor recreation efforts. My National Parks Legacy Project pledges to secure \$4.9 billion to help ensure that our national parks are properly maintained and enhanced. In addition, I have directed the Department of the Interior to prepare an annual report describing the condition of our parks and offering specific recommendations to improve them.

During Great Outdoors Week, we also honor Americans who volunteer their time to restore and safeguard these national treasures. These generous individuals collectively contribute millions of hours to clean shorelines and waterways, maintain trails and campsites, staff interpretive centers, and perform other important tasks. Their efforts help ensure the continued vitality of our precious natural areas and enhance the quality of life for all Americans.

Now, Therefore, I, George W. Bush, President of the United States of America, by virtue of the authority vested in me by the Constitution and laws of the United States, do hereby proclaim June 10–16, 2001, as Great Outdoors Week. I call upon the people of the United States to observe this week with appropriate ceremonies and activities and to participate in safe and wholesome outdoor recreation.

In Witness Whereof, I have hereunto set my hand this eleventh day of June, in the year of our Lord two thousand one, and of the Independence of the United States of America the two hundred and twenty-fifth.

George W. Bush

[Filed with the Office of the Federal Register, 10:54 a.m., June 12, 2001]
